

PRESS RELEASE

From Racks to SaaS: Epsis Launches *Enify Control*

A software-first control room platform where every screen becomes a decision tool — already live with industry leaders.

Bergen, Norway – 03 September 2025 — Epsis, the Norwegian software company behind the Enify platform, today announced the launch of Enify Control, a new software-first approach to building and operating control rooms and operations centres.

Enify Control replaces hardware-heavy setups with a software-defined orchestration layer, enabling teams to design, run, and adapt workflows digitally. By reusing existing PCs, displays, and networks, Enify Control allows organizations to modernize without costly “rip-and-replace” upgrades — delivering clarity, speed, and flexibility from day one.

“Running a modern operations centre shouldn’t depend on racks of custom hardware,” said Jan-Erik Nordtvedt, CEO of Epsis. “With Enify Control, every screen becomes a decision tool. Teams gain the freedom to operate smarter, faster, and from anywhere — without being locked into one vendor’s box.”

Why It Matters

Traditional control rooms are expensive, hardware-bound, and slow to adapt. Enify Control changes that:

- Setup in days, not months
- Reuse what you already have — PCs, screens, networks
- No AV matrices. No complex KVMs
- Plan smarter — design and test your control room digitally before installation, then scale with hardware only where it adds value
- Scale with software — from one desk to a global centre

Already in Use: Enify is already in use at leading energy and emergency response organizations, proving its value in high-stakes operational environments.

What's New in Enify Control

→ Real-Time Source Control

Orchestrate live feeds from any PC, app, or window. Combine multiple sources into a shared view — on a desktop, video wall within your local network, using software.

→ Built on the Full Enify Platform

Includes Enify's one-click Boards, role-based workspaces, links across apps and screen layouts. For saving and reusing.

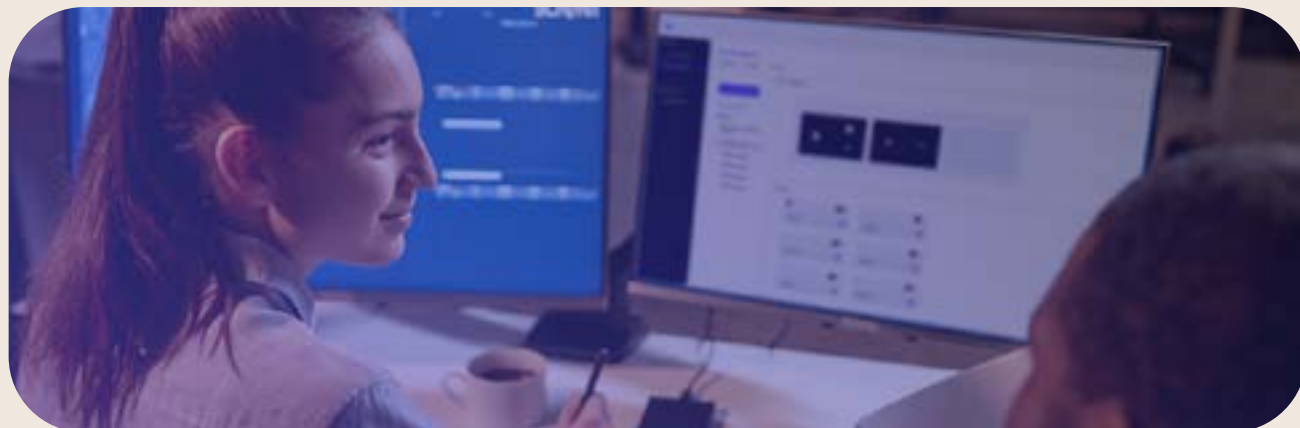

→ Collaboration Everywhere

Operators, planners, and specialists share the same live context — onshore, offshore, or remote.

→ Software-Defined Scaling

Start small, grow as needed. From a single desk to a global operations centre.

Two Paths, One Solution: Whether upgrading an existing room or planning a new one, Enify Control adapts to your needs, without vendor lock-in.

Rethinking the Control Room

The term “control room” often focuses on screens and walls. Enify Control reframes it as a workflow environment for the entire operations team, operators, planners, coordinators, and specialists working together in real time.

“Behind every operation are teams who need structure, clarity, and context, wherever they’re working,” Nordtvedt added. “Enify Control closes that gap and brings the control room experience to everyone, not just those in the room.”

Availability

Enify Control is delivered as SaaS, ready to launch and scale with you and your team.

Partner Ready: AV/IT partners can deliver Enify Control alongside existing networks and displays — making modern control rooms faster to deploy and easier to maintain.

About Epsis

Epsis is a Norwegian consultancy and software company with more than 20 years of experience in digital workflows and operations centres. Its flagship platform, Enify, helps hybrid operational teams structure tools, context, and tasks — enabling faster decisions, better structure, and a smarter path to scalable operations.
